### WAMAS SERVICE DESCRIPTION AND GOVERNANCE

**Description**
The WA Master Addressing Services (WAMAS) shared web services can be consumed from within a web page or from a mainframe, desktop or server application.

**List of Services**
The AIP services consist of tools that:
- Correct an address to USPS standard format;
- Add coordinates to an address so it can be displayed and viewed on a map; and
- Locate an address within the correct border areas like voting, legislative, and taxing districts and many other important boundary jurisdictions.

**Service Owner and Location of Service**
The Geospatial Program Office is the service owner of WAMAS. The service is co-located with the Geospatial Portal and hosted at WaTech.

**Governance**
The Geographic Information Technology (GIT) Committee’s Sub Committee on Portal & Addressing oversees the operational governance of these cross-agency location based services.

**Funding and Support**
WAMAS is funded by a limited on-going budget, and has no operational funding to hire staff to administer and support these services.

### WAMAS TERMS OF SERVICE

**User Support**
All application, database, and user support is provided in-kind by participating agencies on an “as time allows basis”. End users and requesting organizations must have the technical knowledge or resources to support their use of WAMAS services. See Agreement below for link to online documentation.

**Hours of Operation**
Services are guaranteed to be up and running Monday through Friday from 7:00 AM to 6:00 PM.

**Infrastructure**
WAMAS is a dedicated infrastructure consisting of 6 virtual servers, ArcGIS Server, SQL Server, Safe Software FME Server, Melissa Data (USPS) Data Quality.
Components, Esri StreetMap (HERE); and a custom WAMAS QA/QC location improvement tool.

### Frequency of Data Updates
Any addresses found by WAMAS services for the first time are added to the Master Address File (MAF) on a nightly basis. The third party USPS data is updated monthly. All third party components are updated as needed. □ Understood

### Improvement of Address Location Information
It is the responsibility of all participating organizations to correct an address location using the WAMAS QA/QC location improvement tool if errors are found. This ensures continual improvement of the Master Address File (MAF) and the location information returned to end users. The service link to the WAMAS QA/QC location improvement tool is available upon request. Send an email to wamas@watech.wa.gov □ Understood

### Returned Results
Your data submittals must follow the specified data input format exactly. Data that does not conform to the required input format may return unlikely results. See Agreement below for link to online documentation. □ Understood

### Documentation
The FAQ’s provide extensive insight on the use of the API’s and help resolve general issues with using the services. See Agreement below for link to Online Documentation. □ Understood

### API Service Enhancements
There is no funding for enhancements, but suggestions are welcome. A user or organization may fund enhancements under a mutually negotiated contract or provide staff resources to develop and implement any approved enhancements. Submit inquiries and suggestions to wamas@watech.wa.gov □ Understood

### Access and Business Justification
All use cases must be documented in order to procure the funding for continuity of WAMAS services. To achieve this, submit a simple business use description when you request access to these services. The access request form is available at: https://ocio.wa.gov/initiatives/geospatial-program-office/washington-master-addressing-services-wamas □ Understood

### Limitation of Data Usage
All WAMAS and third party data is licensed for use within existing state and local jurisdictions and cannot be shared or used for commercial purposes. Agency contractors are restricted from using this data outside their existing state contract(s). □ Understood

---

**AGREEMENT**

1. It is understood that the formatting of data is critical to the results and outcomes returned to the users.

2. There is no user support for these services but Online Documentation is available. The user is responsible for any and all results generated and the state cannot be held liable for the information.

3. It is understood and agreed that the online QA/QC Location Improvement Tool insures that data is improved once and used many time. The expectation is that agency GIS users will improve their data using this tool to ensure others have access to the improved data.

4. When requesting access to WAMAS, users are required to submit a completed simple, short Business Use Case along with the Terms of Service.

5. The State of Washington waives all liability for any damage, injury or loss caused by the location information returned by the WAMAS services or contained in the Master Address File (MAF).

6. By submitting this form, you acknowledge your responsibilities. Forward form to wamas@watech.wa.gov
